The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-4, 8, 11 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over the Craciunescu et al. reference has publication date of 1992.

The Craciunescu et al. reference (presented by Applicants in Paper No. 15) discloses applicants' compound therein L is ethyl xanthate in the formula $(pt \text{ } (L)_2)^0$ (translation p. 3, lines 22, 23, 27 and 28) for treating "dual (antitrypanosome and anti-tumor) "in vivo"..." (see title page 1 of translation) at a range of 600,400,200 and 100 mg/kg (see page 9, last line). Accordingly, one skilled in this art would find ample motivation from the prior art supra to employ the claimed compound, bis (ethyl xanthate) platinum for treating cancer in the form of a pharmaceutical composition with a

Art Unit: 1614

reasonable expectation that said compound would be effective as a pharmaceutical for treating said cancer in the absence of a side-by-side comparison.

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claim 12 is rejected under 35 U.S.C. 101 because the disclosed invention is inoperative and therefore lacks utility. The Craciunescu et al. reference present by Applicants' in Paper No. 15 states in Table 11, last two lines that "the complexes that do not appear in this Table have been inactive with all tumor types (total doses of 600, 400, 200 and 100 mg/kg). "Applicants' Bio (ethyl xanthate) platinum (thioplavin) was not in Table 11 of the reference. The instant claim is directed to "cancerous disease" which would include all cancerous diseases including the ones in the Craciunescu et al. reference. Changing the term "cancerous diseases" to the specific cancerous diseases set forth in claims 13 and 15 would overcome this rejection.

Claims 13 and 15 are objected to as depending on a rejected claim 12.
